

# MPS-YD

Stainless expansion joint profile, is used for the preventing situations like expansion and narrowing on floors. It fills the gaps by using at certain intervals on the ceramic surfaces that are furnished on wide areas. Stainless expansion joint profile transforms the possible dirty view between the gaps to the elegant and useful image. It is especially used in big open public places like hotels, business centers, hospitals and it contributes to the decorative image of the place by complying the place with different colour options. Stainless expansion joint profile is produced stainless steel and can be montaged by special pvc bazalt system.
